

Appeal to the Secretary General and Agencies of the United Nations  
all Heads of State and all Energy & Environment NGOs

The most criminal invention is the enrichment of uranium and the most absurd term is “peaceful use of nuclear energy” as abused by many promoters of this fatally destructive, lethal technology. Enriched Uranium, radioactive emissions and the waste from nuclear power plants will sooner or later eliminate all life on Earth as observed at Chernobyl causing the deadly radioactive cloud over Europe and the radioactive leaks into the Pacific Ocean from Fukushima killing sea life, making fish lethal and all Pacific coasts radioactive for thousands of years. Besides such inevitable risks nuclear power is the most expensive method to generate electricity with the finite resources uranium or thorium.

Statistics show undeniably that populations near natural uranium deposits and around all nuclear power plants suffer from strontium-90, cesium, cobalt and tritium contaminations causing cancer, loss of teeth, childbirth complications and premature death. See [www.radiation.org](http://www.radiation.org) and newsletters on [www.uniseo.org](http://www.uniseo.org). Nuclear technologies are neither peaceful nor safe because of human failures (Chernobyl, Sellafield, Three Miles Island etc.). Natural disasters (Fukushima), material fatigue in over hundred cases, possible meteorite hits or rockets from terrorists or wars are unavoidable. The radioactive waste cannot be safely deposited. Nuclear power is not clean at all as stressed by its proponents, nor CO<sub>2</sub> neutral with all the uranium mining, enrichment and transportation needing fossil fuels !

For the cost of a nuclear power plant several wind farms, solar systems, geothermal or hydropower plants can be built with a multiple of the power and at no fuel cost. The life cycle of a nuclear power plant is a catastrophe with fatal radioactive emissions over and beyond its whole operation, leaving deadly traces to future generations and biospheres.

No nation has the right to endanger whole populations beyond its borders affecting future generations forever with cancer, infertility and endangering all life on Earth and in the seas !

**Therefore all nuclear power must be stopped as fast as possible**  
by a United Nations resolution and by all governments to allow the survival of life on Earth !

Gustav R. Grob, Fellow of the Energy Institute, London, Dean em.  
Chairman of the ISO/TC203 committee on energy systems analyses\*
