

The Clean Sustainable Family of organisations wish you all a

Successful Happy New Year 2015

on a naturally green planet Earth

in pure air and with clean water

clean sustainable energy for all

peacefully in an armless society 

Clean Energy dedicated to humanity by Hans Erni in 2000 A.D.

Gustav R. Grob in harmony with a motivated international team

United World

MEDSHILD - GEOCOGEN - METHASYN - STARWIND - HYSOLAR - HELM
for the United Nations Decade of Sustainable Energy for All

.... on a naturally green planet Earth

Humankind has to find its way back to nature without squandering finite resources polluting the environment and endangering the health

..... in pure air and with clean water

Pollution of air, water and food is the main reason for severe health problems. It must and can be drastically reduced by benign clean sustainable energies !

..... clean sustainable energy for all

All our associated organizations are working on the implementation of decentralized clean environment-friendly energy systems for everybody.

..... peacefully in an armless society

All the wasteful war budgets of over one Trillion \$ per year must be deviated into peace-building activities and for clean sustainable energies to protect humankind and nature from decay.

CMDC

The World Circle of the Consensus (**Cercle Mondial Du Consensus**) initiated 1984 the Global Code of Ethics during the Marcos corruption in the Philippines. In 1992 CMDC proclaimed the **Global Energy Charter for Sustainable Development** by its World Sustainable Energy Coalition **WSEC** at the first United Nations Rio Summit www.cmdc.net

ISEO is the UN-ECOSOC accredited NGO initiated 2002 at the Swiss National Council by members of six political parties to promote and implement sustainable energy world-wide, based on the earlier initiative by the **CMDC** World Sustainable Energy Coalition **WSEC**, implementing the Global Energy Charter for Sustainable Development www.uniseo.org

ISO jointly with **IEC** in the electrical field and **ITU** for telecommunication are the international technical standardization bodies needed for certification. The ISO standards on energy systems analyses and statistics are indispensable tools for sustainable energy - see ISO/TC203 www.iso.org & www.iec.ch & www.itu.int

The **International Clean Energy Consortium ICEC** was founded 1991 ahead of the first Rio Summit in 1992 as a vehicle for the implementation of clean energy systems, based on the Global Energy Charter for Sustainable Development. ICEC cooperates with universities, manufacturers and investors. www.icec.ch

The **International Ecoenergy Academy IEA** founded in Baku as forerunner of ecological energy policies and strategies is associated with **ISEO** in Geneva to expand its fruitful work world-wide to bring the environment and energy into balance. An extended and updated Blueprint for the Sustainable Energy Age will be jointly issued www.ieacademy.org

The global currency **G** as discussed at the International Currency Conference in China in 2014 and the BITCOIN initiative are essential means to give all humans equal economic chances without currency manipulations causing loss of revenues and savings as recently experienced again in Russia and before over centuries.

.....all in harmony with a progressive international alliance

World Progress Report and Outlook 2015

The world-wide tendency towards bio products is gaining ground in most countries and by all generations. "Back to nature" must be everybody's future credo, realizing that too much chemistry in daily life and agriculture is damaging the health and biosphere. Natural alternative medicine is getting accepted by health insurances. Procure the "**Naturally Fit & Healty**" guide from the ISEO-CMDC secretariat in Geneva.

pure air & clean water

are making good progress thanks to cleaner transportation with electric and clean fuel power drives. Buildings rely less on fossil fuel fired heating systems thanks to decentralized solar systems providing clean electricity and heat.

clean sustainable energy for all

This slogan proclaimed by United Nations Secretary General Ban Ki-moon at the 3rd Summit for Sustainable Development in Rio is now becoming globally well accepted in accordance with the UN declaration of the **Sustainable Energy Decade**, sparked off by the ISEO conference on sustainable energy in January 2013 in Geneva. However some politicians still seem to ignore the ISEO appeal to **STOP the insane, finite nuclear power technology !!** The urgent request addressed to the United Nations to **prohibit all Uranium enrichment** after the Fukushima catastrophe was not taken seriously. In the last News Years message the terrible radioactive contamination of the whole Pacific Ocean, threatening the survival of all sea life was ignored by many decision makers, especially in Asian nations and by Russia, who are still planning lots of too expensive, unsafe nuclear power plants, while clean renewable energy systems can supply enough decentralized cheap energy without any environmental risks. Urgent action by the United Nations is required to stop such irresponsible energy plans endangering the whole world population for thousands of years ! See the alarming Fukushima report on the back page.

peace in an armless society

Criminal members of society, terrorists and governments are still purchasing arms and organizing armies to the extent of 1,7 Trillion \$ (1'700'000 Million US\$!) every year to kill innocent people for religious or selfish economic or political reasons. This money is missing to safe our planet from insane behaviors destroying our biospheres and health of humans, plant life and animals. It is the most urgent noble task of the United Nations, NGOs, private citizens and academia to stop this madness and the waste of tax payers moneys before it is too late for planet Earth.

International Clean Energy Consortium Review and Outlook for 2015

METHASYN[®] the future universal clean, sustainable fuel & feedstock www.methasyn.com

The future fuel concept based on methanol proposed by late ICEC co-founder Prof.Dr. John O'M. Bockris, Nobel laureate Prof. George Olah, Prof.Dr. Esteban Chornet, Prof.Dr. Urs Weidmann and Prof.Dr. Frank Stoecklin was presented world-wide with several methanol plants in the planning stage with experienced technology partners, using organic wastes as amply available cheap feedstock, thus solving also the waste management problem in a profitable, ecological way instead of dumping or incinerating the waste at a loss to the community treasuries.

STARWIND[®] the 4th generation gearless p.m. MW wind turbine technology www.starwind.info

Manufacturing, international project planning and implementation are progressing, increasing the efficient clean and wind power share at lowest installation and maintenance cost in the renewable energy mix of the MegaWatt class, that surpassed in 2014 an installed world wind power peak capacity of 320 GW.

GEOCOGEN[®] the 4th generation geothermal co-generation technology www.icec.ch

GigaWatt projects are still in the planning stage adding to the geothermal energy share of presently about 15 GW world-wide considerably despite the setback due to the restructuring of the ailing European utilities.

HYSOLAR[®] the 4th generation solar hybrid heat & PV technology www.icec.ch

Manufacturing plans in low cost countries, international project planning and implementation are making progress of this super efficient roof-integrated hybrid solar system, increasing the solar share in the renewable energy mix beyond the installed combined thermal & electric sectors of 400 GW world-wide.
