

Our best wishes for a successful continuation of the clean, sustainable energy evolution in 2017

25th Anniversary of the historic World Clean Energy Conference promoting Clean Tech and Sustainable Development with the United Nations in Geneva

Credo for 2017

- **Replace all polluting, risky unsustainable energy technologies by clean ones**
- **Redirect all subsidies from military, nuclear and other dangerous systems**
- **Reduce health cost and death casualties by clean energy technologies**
- **Make all clean energy systems main-stream by adequate financing**

.. for a naturally green planet Earth

Humankind has to find its way back to nature without squandering finite resources polluting the environment and endangering the health.

..... in pure air and with clean water

Air pollution and contaminations of water and food are the reasons for health problems that can be drastically reduced by clean technologies.

..... Clean Sustainable Energy for All

All our associated organizations are working for the implementation of affordable, clean, decentralized environment-friendly energy systems for everybody ...

..... peacefully in an Armless Society

The wasteful war budgets of over a Trillion \$ per year must be deviated to peace-building activities and for clean sustainable energies to protect humankind and nature from destruction and to deprive terrorism of all fire arms and explosives !

Progress Report 2016 and Outlook for 2017

The call by the UN Secretary General Ban Ki-moon for "**Clean, Sustainable Energy for All**" concurrent with the **Sustainable Energy Decade** started at the ISEO congress in 2012 and the **Sustainable Development Goals**, complemented by the **COP21 & COP22 objectives** and the **UNEP goals** for less pollution by cleaner technologies, fostered also the **UNISDR & ISEO MEDSHILD-REDSHILD projects** for natural disaster prevention, to help humanity to survive, thanks to the **CMDC-ISEO Natural Health** and **Global Ethics Codes** to enable humankind to reduce sufferings by replacing ill-conceived technologies and thoughtless human misbehavior.

2016 was a record year of clean, renewable energy growth with the total investment exceeding 300'000'000'000 USD (>300 billion \$), while investments in finite fossil energy systems were shrinking and funds were withdrawn from fossil fuel engagements. This world-wide trend is going to increase in 2017 to the demise of military budgets, wasting over one trillion \$ instead of enabling the survival on Earth by protecting the climate, biospheres, waters and humanity's health. More coal mines are closed and dangerous power plants decommissioned to avoid catastrophes like Fukushima and Chernobyl, all to be replaced by safe, sustainable energy generation to power the millions of electric vehicles and building systems.

The world-wide trend towards natural vegetarian bio products is also gaining momentum. "Back to nature" should become everyone's vocation, realizing that too much chemistry in daily life and agriculture is impairing the health and biospheres. (Slovenian ISEO VP Martina Sumenjak sitting below on the left). Natural alternative therapies are becoming more and more acceptable by health insurers. The "Naturally Fit & Healthy" guide for a sustainable life is available from the ISEO secretariat in Geneva free of charge for members - see contact below.

Great ISEO team spirit among clean technology promoters for the success of clean, sustainable energy by engineers, journalists and medical doctors (here from left to right engineer Adolf and journalist Inge Schneider, ISEO President Gustav R Grob with VP Dr.med. Kamal Esseghairi).

At the WCEC **World Clean Energy Conference** in Geneva, **Dr.med. Maria Neira**, Environment Director of the World Health Organization stressed that the high number of death casualties and millions of health sufferings could be avoided by the reduction of energy pollution. **Scott Foster**, UN-ECE Energy Director redefined the value of energy in the sense of providing **clean energy services** - see also UN TED TALK video on www.wcec.uno.

Swiss clean solar flight pioneer, Professor **Bertrand Piccard** (on the left) of the famous SOLAR IMPULSE round-the-world flight, is calling for a world alliance of clean energy organizations, to achieve the ISEO forecast as illustrated in above histogram, seconded by the President of the Energy Watch Group, former German Federal parliamentarian and Green Party energy speaker **Hans-Josef Fell**, who condemned the contra-productive trillion \$ subsidies for polluting and radioactive power plants. He is driving electric cars since decades to demonstrate this clean transport option.

Read the full WCEC report in several languages and **the Blueprint for the Clean, Sustainable Energy Age** on www.wcec.uno > **Media Release** and > **Blueprint**. Subscribe to ISEO Newsletters, free of charge for members.

The ISEO team is planning a WCEC conference in the Africa-Eurasia region and cooperating with all international organizations, including all relevant UN and EU agencies and programs.

Membership: Everybody is cordially invited to join ISEO for the advancement of clean energy development for a healthier, happier life. You may start local action groups for the implementation of clean technologies and meet at joint conferences. You are very welcome to order the ISEO Newsletters and publications by the enrolment form under the "Application" button on www.iseo.uno and www.cmdc.uno.
