

International Sustainable Energy Organization

Partnership Benefits also for Global Commons

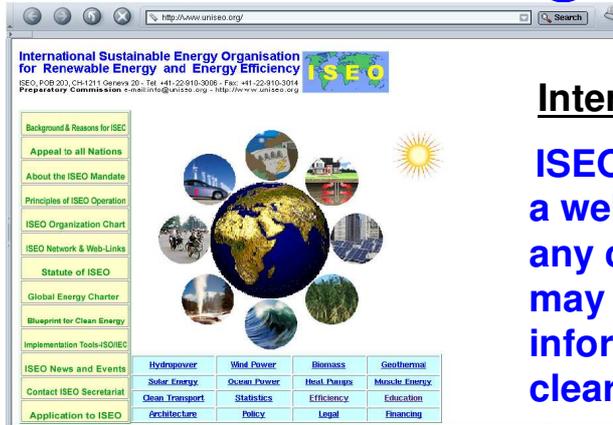

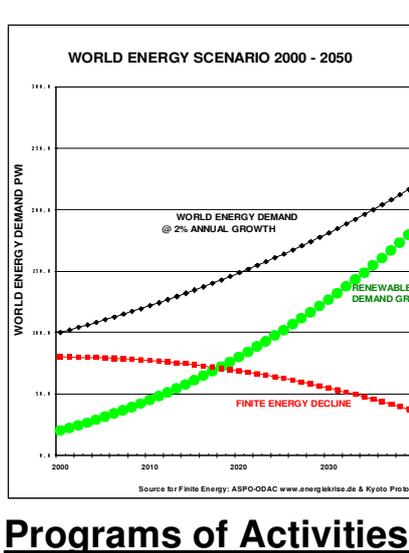

www.uniseo.org

Objective

ISEO accelerates and enlarges the world-wide contribution of clean, sustainable energy to economic and equitable social development

Definition

Sustainable energy includes any energy system, source, carrier and use, that does not harm the health, environment, climate and peace on Earth

Internet Portal

ISEO operates a web-platform any contributor may use as an information clearing house

ISEO Main-Task

The motivation to accelerate the use of clean, sustainable energy is based on the scenario on the left: 2 % * assumed annual world Energy Consumption Growth and the effect of the Kyoto Protocol and Depletion of Mineral Resources result in the need for a Green Energy Growth of at least 5 % per year necessitating billions of annual Investments for new clean, sustainable energy systems.

(* the 2% growth limit is only possible with all conceivable efficiency measures)

Programs of Activities

- ISEO invites experts from all continents to participate in a global network
- ISEO assists in designing more effective financing tools and mechanisms
